        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The specification describes a polypeptide having heparanase (hp) activity. The recombinant protein is used as a modulator of heparinbinding growth factors, cellular responses to heparin-binding growth factors and cytokines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoal and bacterial infections or disintegration of neurodegenerative plaques. Heparanase may be useful for

Claim 6; Fig 1; 63pp; English. New human polynucleotide useful and inflammation. N-PSDB; AAX35648.

for treating angiogenesis, restenosis,

WPI; 1999-302255/25.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     conditions such as wound healing, angiogenesis, restenosis, atherselerosis, inflammation, neurodegenerative diseases, and viral infections. Mammalian heparanase can be used to neutralize plasma heparin, and anti-heparanase antibodies may be applied for immunodetection and diagnosis of micrometastases, autoimmune lesions, au renal failure in biopsy specimens, plasma samples, and body fluids. The present sequence represents human heparanase

                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC The present invention describes genetically modified cells (A) containing CC a polynucleotide (I) that encodes a polypeptide with heparanase activity, CC and express recombinant heparanase (II). Heparanase cleaves heparan CC sulphate (HS) at specific intrachain sites, resulting in release of CC heparin-binding growth factors, enzymes and proteins that are sequestered by HS in basement membranes, extracellular matrix or cell surfaces. It CC may also be implicated in tumour anglogenesis and metastases. (II) is CC restenosis, atherosclerosis, inflammation, neurodegeneration, viral CC potentially useful in wound healing and for treating angiogenesis (C restenosis, atherosclerosis, inflammation, neurodegeneration, viral CC infection and cystic fibrosis. It can also be used to neutralise heparin CC (an alternative to protamine) and to screen for specific inhibitors (potentially useful for treating cancer and metastases). Antibodies CC raised against (II) are used for immunodetection and diagnosis of CC micrometastases, autoimmune lesions and kidney failure. (A) provide (C activated/neutralised by a dedicated protease. The present sequence (C represents shuman hearanase)

The present sequence represents a human protein with heparanase catalytic activity. The heparanase (hap) polynucleotide is useful in gene therapy, particularly in treating tumour, inflammation or autoimmunity.

Particularly, the polynucleotide is useful in modulating the bloavaliability of heparin-binding growth factors, cellular responses to heparin-binding growth factors, cellular responses to interleukin (II)-8), cell interaction with plasma lipoproteins, cellular susceptibility to certain viral and some bacterial and protozoa infections, or disintegration of neurodegenerative plaques. The polynucleotide is also useful in wound healing (e.g. thermal, chemical or radiation burns), and in the treatment of angiogenesis, restenosis, atherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-Straussler Syndrome or Creutzfeldt-Jakob disease), and some viral, bacterial or protozoa infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; heparanase; gene therapy; tumour; inflammation; autoimmunity; heparin-binding growth factor; cytokine; neurodegenerative plaque; wound healing; infection; burn; angiogenesis; tetenosis; atherosclerosis; inflammation; neurodegenerative disease; Gerstmann-Straussler Syndrome; Creutzfeldt-Jakob disease.

The probes and antiheparanase in situ. The probes and antiheparanase, for diagnosis and monitoring of diseases (especially the paranase, for diagnosis and monitoring of diseases (especially the metastasis), for treatment of heparanase-associated diseases (e.g. tumours, (adeno)carcinoma, squamous cell carcinoma, teratocarcinoma, mesothelioma, melanoma, lymphoma or leukemia, a solid cancer (or its metastases) derived from liver, prostate, bladder, breast, ovary, cervix, colon, skin, intestine, stomach, uterus and pancreas, kidney disease, diabetes and inflammation, haemorrhagic nephritis, nephrotic syndrome, sepsis and inflammatory or autoimmune disease), for targeted drug delivery (e.g. of anticancer agents) and as research reagents. The present sequence represents human heparanase, which is used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 543
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Heparanase-specific e.g. of tumors, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (INSI-) INSIGHT STRAT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઈ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ঠ
The invention relates to an isolated avian and reptile nucleic acid, encoding a polypeptide with heparanase catalytic activity. The signal peptide of the nucleic acid can be used to express membrane-associated c secreted proteins in heterologous expression systems. The encoded polypeptides can be used to prevent tumour angiogenesis, metastasis and invasion, and to intervene with pathologies associated with impaired heparin-binding growth factors, cellular responses to heparin-binding growth factors, cellular responses to heparin-binding mouth factors, cellular responses to heparin-binding seconds.
                                                                                                                                                                                                                Nucleic acid encoding avian and reptile heparanase polypeptide is to treat various heparin-related disorders and the signal peptide useful in production of membrane-targeted or secreted recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Heparanase; catalytic; cytostatic; antiviral; antibacterial; enzyme; anti-protozoan; neuroprotective; heparin; human.
